PROFESSIONAL SUMMARY

MSc Artificial Intelligence & Robotics student with enterprise SaaS operations experience at Hewlett Packard Enterprise. Built InsightAI, an AI monitoring platform using Python, FastAPI, and Docker. Skilled in Python, Linux, REST APIs, and cloud tools. Seeking software engineering, IT, and entry-level virtual internships and part-time roles.

EXPERIENCE

Cloud Operations Intern – Hewlett Packard Enterprise

Mar 2025 – Sep 2025 | India

- Supported enterprise SaaS environments for 5 servers, maintaining 98% uptime through effective remote collaboration and cross-functional troubleshooting.
- Automated CPU uptime checks and log analysis using Python and Linux, reducing manual monitoring effort by 60% and cutting log analysis time from 2 hours to 30 minutes.
- Authored technical documentation and onboarding materials for engineers, reducing ramp-up time for new intern hires by 40%.

EDUCATION

University of Hertfordshire – United Kingdom

Jan 2028

MSc Artificial Intelligence & Robotics

Relevant coursework: Machine Learning, Neural Networks, Robotics, Computer Vision, LLMs

Adikavi Nannaya University – India

Apr 2025

Bachelor of Computer Applications

Graduated with 93%

VOLUNTEERING & LEADERSHIP

Volunteer Instructor – Community Tech Workshops

Sep 2025 – Dec 2025

- Delivered 10+ hands-on workshops to 40+ beginners, teaching Python, AI concepts, and database fundamentals through live coding sessions and real-world exercises.
- Designed structured lesson plans and project-based learning modules, enabling participants to build functional applications by course completion.
- Provided one-on-one mentoring to struggling learners, adapting teaching methods to individual skill levels and boosting overall cohort completion rates.

SKILLS

Programming: Python, SQL, C, PostgreSQL

AI & Data: Generative AI, LLMs, Prompt Engineering, Machine Learning, REST APIs, FastAPI

Cloud & DevOps: Linux, Docker, Kubernetes, Git, Azure

PROJECTS

InsightAI – AI Monitoring & Analytics Platform

Jul 2026 – Present

- Architected an AI-powered monitoring platform with REST APIs to track LLM application performance in real time, enabling proactive issue detection across production environments.
- Built features to analyse prompts, detect hallucinations, and evaluate model quality through automated QA and testing protocols.
- Developed dashboards for token usage, response accuracy, customer satisfaction, and cost monitoring.
- Leveraged remote collaboration platforms and asynchronous communication tools to align project milestones and technical requirements with distributed team members throughout the development lifecycle.

House Price Prediction

Jun 2026 – Jun 2026

- Trained a Scikit-learn regression model on property features (location, size, room count) to predict real estate prices, achieving strong predictive accuracy on held-out test data.
- Visualized data distributions, feature correlations, and model performance metrics using Matplotlib to validate prediction quality and inform feature selection.
